FOR IMMEDIATE RELEASE

THE ORIGINAL WRIST-ASSIST!

Mount Dora, FL – June 30, 2008 – Robin Stopper, a 24 year veteran nail technician and owner of R.S. Innovations, LLC, developed the wrist-assist to ease repetitive strain issues associated with the working environment of the nail industry. The elevated wrist support moves in all directions for optimum placement of clients' hands, while offering increased comfort and stability. This unique design improves technician's posture and relieves muscle fatigue in wrists, hands, neck and back.

The wrist-assist was created to promote a healthy working position, and maximize client comfort. More information on the wrist-assist can be found at www.rsinnovations.net.
